This email is regarding NAB's petition 04-160. As a subscriber to satellite radio I urge you to reject the petition. Commercial free radio is the medium most capable of providing up to the minute traffic and weather information. I believe that if other commercial broadcasters feel threatened by the quality and variety of programming provided by satellite radio perhaps they should consider improving their services rather than decreasing the availability of services better than theirs. Thank you for your consideration.

Sincerely,  
Lindsay Moyer
